

CTOTF Conference

*Advanced Electronic Filtration Systems*

**Abstract:**

Filmax Inc of Loudon, Tenn. has introduced a revolutionary new patent applied for Varnish control technology that is proving to be far superior to others currently in use on large and medium size combustion turbines and hydraulic equipment. A focused electronic method removes more hard and soft material than seen before. Filmax has also demonstrated a new particle counting technology to measure and quantify this performance with particle sizing and counting down to 10 nano-meters in size. These two technologies promise to bring new dimensions to varnish measurement, documentation, and control.
