

Predictive Maintenance—an Overview

Co-Presented by

John Bankhead—President Reliability Testing Services, Inc.

Kevin Nordenstrom—Corporate Director of Reliability, Calpine Corp.

This presentation will provide a brief overview of some of the technologies that are available to the maintenance / engineering professional today. Included will be examples of vibration analysis, infrared imaging, on and off line testing for electric motors, gas leak detection, and corona detection. Additionally, information will be provided on which technologies have proven to be most effective in terms of cost avoidance when these technologies are applied to a fleet sized equipment population.
